

El model approximately recapitulates static and dynamic scaling forms

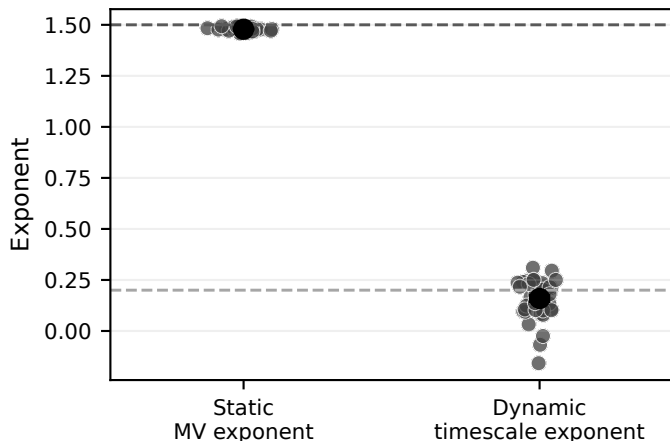

A Static scaling

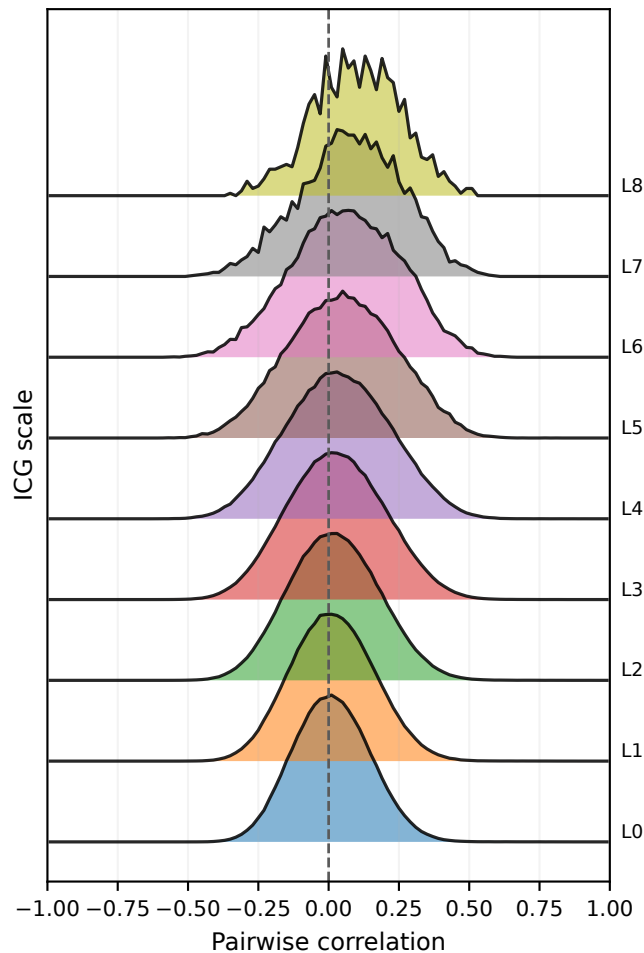

B Dynamic scaling

C Seed-level scaling exponents

D Pairwise correlation distributions across scale

El hierarchical-modular automaton

Seeds: 40

N: 2000

dt: 0.01 s

T: 10.0 s

p_ext: 0.015

slope / phi: 2.4

e_w: 21.4

i_w: 21.7

theta: 7.5

Scaling fits exclude first ICG point.

Thin traces show individual simulations;

black markers show mean $\pm$ SEM.
